

mindist2() und Periodisch!

Monday, October 19, 2015 1:11 PM

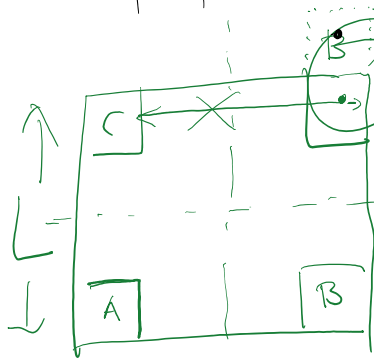

$$\begin{aligned} \underline{\text{min}} &\equiv \underline{c} - \underline{b} \\ \underline{\text{max}} &\equiv \underline{c} + \underline{b} \end{aligned}$$

```
for (j=0, d2=0; j<2; ++j) {
    t = fabs(c[j] - p[j]) - b[j];
    if (t > 0) d2 += t*t;
}
return d2;
```

walk (root, ∞, ...)

nicht notwendig

$$\begin{aligned} c - p = +ve &\Rightarrow C - L \\ c - p = -ve &\Rightarrow C + L \end{aligned}$$

P

$$L \equiv 1$$

$L \equiv 1$
for example

```

for (j=0, d2=0; j < 2; ++j) {
  t = c[j] - p[j];
  if (t < 0) t1 = t + L;
  else t1 = t - L;
  t = fabs(t) - b[j];
  t1 = fabs(t1) - b[j];
  if (t1 < t) t = t1;
  if (t > 0) d2 += t * t;
}

```

könnte man hier implementieren
